Sequence 18882, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION
ADDITIONAL OF THE SEQUENCES RELATING
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/074,788
FILE REFERENCE: 1999-02-18
FRIOR APPLICATION NUMBER: US 60/074,788
FRIOR PELING DATE: 1998-02-18
FRIOR PELING DATE: 1998-07-27
FRIOR FILING DATE: 1998-07-27
                                                                                                                                                                                                                                                                                                                          APPLICANT: Ring, Frederick J.
APPLICANT: King, Frederick J.
APPLICANT: Harris, David F.
APPLICANT: Harris, David F.
APPLICANT: Harris, David F.
APPLICANT: Chan, Danne
TITLE OF INVENTION: Differentiation Enhancing Factors and Uses
TITLE OF INVENTION: Therefor
FILE REFERENCE: DFN-021
CURRENT FILING DATE: 1998-02-13
PRIOR APPLICATION NUMBER: US 60/038,191
PRIOR FILING DATE: 1997-02-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 4; Length 955;

Sequence 30, Application US/07812421

Patent No. 5932697

Patent No. 5932697

GENERAL INFORMATION:

APPLICANT: Cacci, Thomas B.

APPLICANT: Szumanski, Maria B.W.

TITLE OF INVENTION: SYNTHETIC ANTIFREEZE PEPTIDE AND

TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION

NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:

ADDRESSEE: WHITHAM, CURTIS & WHITHAM

STREET: Reston Intl. Center, 11800 Sunrise Valley Dr.,

STREET: Suite 900

CITY: Reston

STATE: VA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 19, Application US/08663731

Patent No. 5932697

GENERAL INFORMATION:
APPLICANT: Caceci, Thomas E.
APPLICANT: Saumanski, Maria B.W.
TITLE OF INVENTION: SYNTHETIC ANTIFREEZE PEPTIDE AND
TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
ADDRESSEE: WHITHAM, CURIIS & WHITHAM
STREET: Reston Intl. Center, 11800 Sunrise Valley Dr.,

Sequence 4, Application US/09293238B

Patent No. 6455042

Patent No. 6455042

GENERAL INFORMATION:

APPLICANT: Bremer, Michael B.

APPLICANT: Parker, Christina M.

TITLE OF INVENTION: A Method of Treating Ulcerative Colitis

TITLE OF INVENTION: A Method of Treating Ulcerative Colitis

TITLE OF INVENTION: A Method of Treating Ulcerative Colitis

TITLE OF INVENTION: A Method of Treating Ulcerating an Antibod

TITLE OF INVENTION: Beta 7 Integrin

FILE REFERENCE: L0560/7005/ERP

CURRENT APPLICATION NUMBER: US/09/293,238B

CURRENT FILING DATE: 19997-06-20

PRIOR FILING DATE: 19997-06-20

PRIOR FILING DATE: 1996-06-14

PRIOR FILING DATE: 1996-06-14
